

Setup Instructions:

- (1) Lay out tarp and place unit on back side of the tarp (unit unrolls from back to front). P.S. When standing behind the unit, it unfolds twice to the left and once to the right. So make sure the unit is place mostly to the right (opposite this picture).

- (2) Remove straps and unroll unit towards the front. Unrolled unit should look like this.

- (3) Start opening the unit and keep centered on tarp.

- (4) Open sides and spread out over tarp.

- (5) Lay out the unit where there is room at front of step (unit should be completely on tarp).

- (6) Attach blower to one tube. Close second tube (fold tube to prevent air from escaping, then strap. Turn blower on. If blower tube flops simply stretch it out.

After unit inflates stake down each corner. Drive stakes into ground at an angle away from the unit. Blower runs constantly.

Roll up instruction:

(1) Turn off blower, open the tubes and air pockets (if applicable). Move vinyl around so it is not bunched up in one place.

(2) Fold one side over in half. The seam should go to the middle of the unit. Walk on this side to get air out. No shoes!

(3) Fold the other side over toward the middle. There should be about a 6" to 8" gap between the two seams. Walk on both sides to get additional air out. No shoes! Air tubes should be stretched out for easy air flow.

(4) Combine both sides. Walk on unit without shoes to flatten before rolling. Place straps under the unit about 1 foot from each side and 3 feet from top (Top is where the tubes are).

(It's best to have someone walk on the unit close to the person rolling it for an easier roll.

(5) Begin rolling up the unit opposite the tubes. Roll as tightly as possible.

(6) When finished rolling, tuck tubes and extra vinyl under the end of the unit.

7. Strap the roll. Finished roll should look like this.

(8) Stand unit on one end, slide bag over top, then turn unit on the other end to close off bag with the string that's attached to the bag.
